BACKGROUND

Involved in the regulation of multiple aspects of embryonic and adult neurogenesis . Required for neural progenitor proliferation in the ventral/subventral zone during embryonic brain development and in the adult dentate gyrus of the hippocampus . Participates in the Wnt-mediated neural progenitor proliferation as a positive regulator by modulating GSK3B activity and CTNNB1 abundance . Plays a role as a modulator of the AKT-mTOR signaling pathway controlling the tempo of the process of newborn neurons integration during adult neurogenesis, including neuron positioning, dendritic development and synapse formation . Inhibits the activation of AKT-mTOR signaling upon interaction with CCDC88A .

APPLICATION

To ensure optimal assay performance, AREX recommends conducting reagent titration tailored to each testing system for optimal detection results.
