BACKGROUND

Ovalbumin (OVA) is the major protein of egg white (~45 kDa) and a model antigen extensively used in immunology research, particularly in murine models of allergy, asthma, and immune tolerance. Anti-ovalbumin antibodies are used in ELISA, WB, and immunoassay for tracking OVA in experimental systems and detecting egg protein contamination in food.

APPLICATION

To ensure optimal assay performance, AREX recommends conducting reagent titration tailored to each testing system for optimal detection results.

ELISA	Use at an assay dependent dilution.
